Current Understandings of Translanguaging

Inside View of Language

A single, dynamic
system involving
linguistic and
communicative
resources

Current Understandings of Translanguaging

Outside View of Language

Languages are
separate entities
with boundaries

Current Understandings of Translanguaging

Outside View of Language

People are often required to filter their repertoire to use specific features that have been categorized as belonging to a named language

Language Boundaries are Performance

- Skills
- Politics
- Nationalities
- Spaces
- Communication partners

In a Free World

- No language separation
- Features are seamlessly integrated
- Communicative choices based on people you interact with

Translanguaging Framework in Deaf Education

01

Crip Linguistics

(Henner & Robinson, 2023)

- Normative speech and language is an idealized myth

is designed to honor and expand students' linguistic repertoires.

Translanguaging Framework in Deaf Education

01

Crip Linguistics

(Henner & Robinson, 2023)

- Normative speech and language is an idealized myth
- All bodies think, move, and produce language in diverse ways

is designed to honor and expand students' linguistic repertoires.

Critical Pedagogical Design

Translanguaging Framework for Deaf Education

Validating Individual Idiolects

- *Recognize that each person's communicative resources are unique, valid, and developed through experiences and interactions*

Translanguaging Framework for Deaf Education

Coming to a Shared Understanding

- *Use semiotic resources (e.g., initial systems, objects/pictures, role play, gesture) to come to a collective, shared understanding*
- *Connect concepts communicated through semiotic resources and initial systems to accessible, expressed languages*

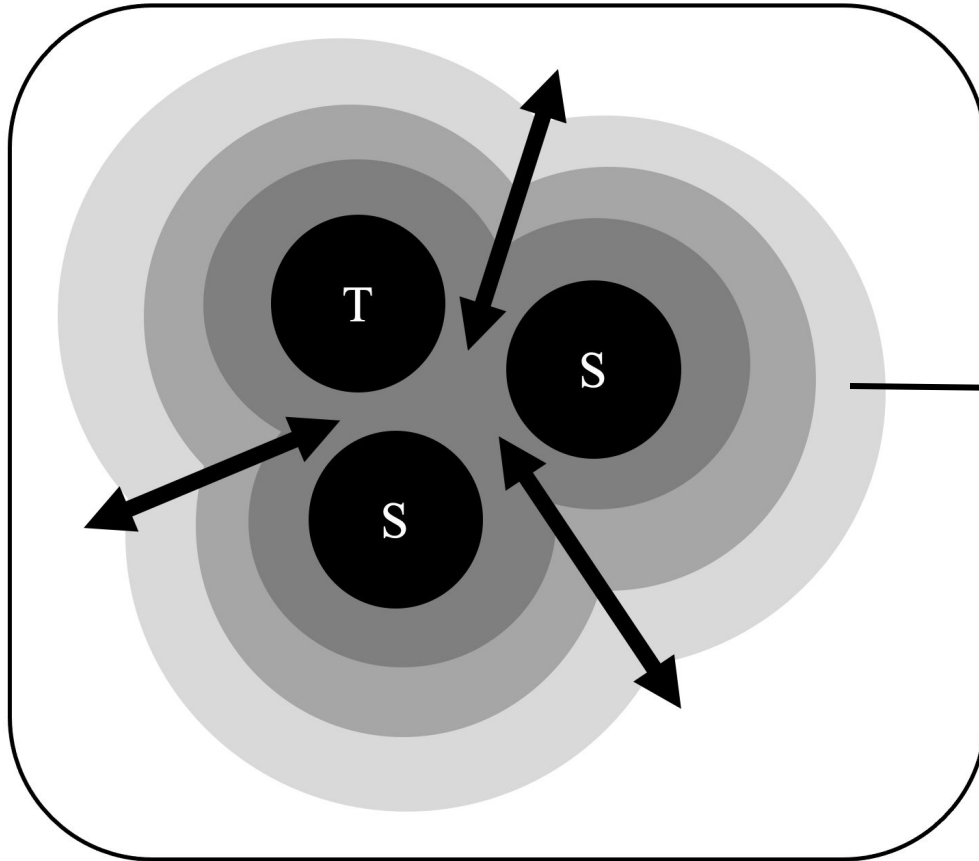

Translanguaging Framework for Deaf Education

Building Metalinguistic Knowledge

- *Deepen knowledge of language variation through explicit instruction and modeling*
- *Make connections between synonyms and phrases that express similar meanings*
- *Make comparisons across languages (e.g., ASL, English, Spanish), modalities (signed, spoken, written), and/or linguistic patterns (e.g., simultaneous and sequential)*

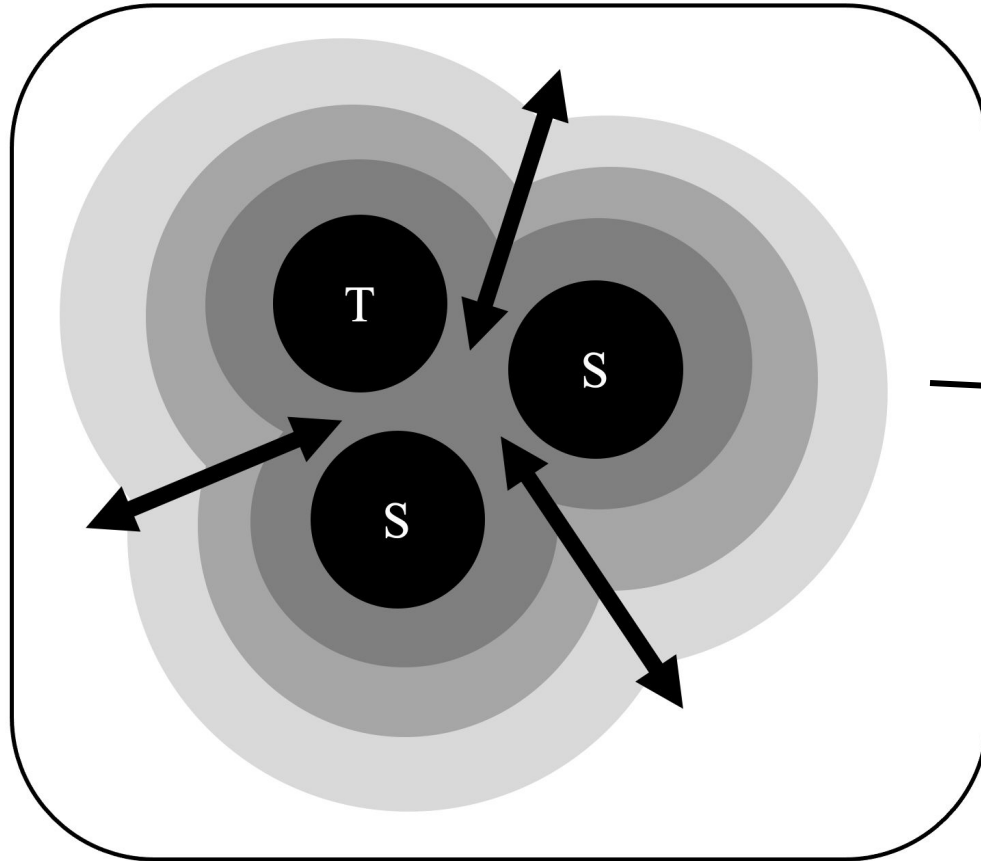

Translanguaging Framework for Deaf Education

Communicating with External Audiences

- *Revise and refine ideas to be expressed based on why we are communicating (purpose) and who is to receive the communication (audience)*
- *Draw upon mentor texts in English, ASL, and/or other languages*
- *Develop genre-specific language knowledge and apply to expressed/received language*

Translanguaging Framework for Deaf Education

Critically Analyzing the Social Context

- *Provide an accessible language environment*
- *Support the legitimacy, development, and use of minoritized languages*
- *Engage individuals and external audiences in the interrogation of linguistic hierarchies and inequities*
- *Work to dismantle inequitable services, systems, and structures*

Translanguaging Model in Writing Research

1. The monolingual model is popular in the literature on deaf students
 - a. Rely on the norms of hearing monolingual speakers of English

2. To date, no study has applied a translanguaging model to analyze the development of deaf writers
 - a. Holistic analysis of integrated linguistic system in making meaning through print

Deaf Writers

Limited access to spoken and/or signed language while developing written language

**Language
Deprivation**

Deaf Writers

Limited access to spoken and/or signed language while developing written language

Language Deprivation

Proficient in signed language and developing written language

No Language Deprivation

Two Studies

Limited access to spoken and/or signed language while developing written language

Language Deprivation

Proficient in signed language and developing written language

No Language Deprivation

Research Questions:

- Do deaf children's written expressions align with the **stages of emergent writing** development?
- What **translanguaging features** are demonstrated in their written expressions?

Participant Identification

Study #1 Language Deprivation

- 1. 385 deaf students from a larger study on writing**
 - a. Grades 3-6 (ages 8-13)
 - b. No additional disabilities
 - c. Demonstrate emergent writing features
 - i. Drawing, scribbling, labeling, writing short phrases

- 2. 42 / 385 students were emergent writers**
 - a. In spoken language environments
 - b. Not using language fluently

Participant Identification

Study #1 Language Deprivation

1. **385 deaf students from a larger study on writing**
 - a. Grades 3-6 (ages 8-13)
 - b. No additional disabilities
 - c. Demonstrate emergent writing features
 - i. Drawing, scribbling, labeling, writing short phrases

2. **42 / 385 students were emergent writers**
 - a. In spoken language environments
 - b. Not using language fluently

Study #2 No Language Deprivation

1. **3 siblings from a bilingual deaf family**
 - a. Access to signed language and written language from birth
 - b. In signed language environments
 - c. Use signed language fluently

Data Analysis

Study #1 Language Deprivation

- Pre- (n=42) & post-writing samples (n=30) during an academic year
1. Stages of emergent writing development
 2. Growth over time
 3. Translanguaging features

Study #2 No Language Deprivation

- Unedited writing samples across 10 years
1. Stages of emergent writing development
 2. Growth over time
 3. Translanguaging features

Data Analysis:

Stages of Emergent Writing Development

	Stage	Description
1	Pre-Alphabetic	Drawing, scribbling, mock letters
2	Emergent	Recognizable letters written in random order
3	Transitional	Recognizable letters written phonetically or as labels
4	Conventional	Words written in short phrases
5	Fluent	Words written in complete sentences

Data Analysis: Translanguaging Features

Features

Stages of Emergent Writing Development

What did I do last Halloween? I put on my costume. My costume is Emo prom queen. My dad put makeup on me to look like a zombie. Some people look at me and look scared. I'm very excited to get candy! Finally time for trick or treat. I get candy, then meet some friends and trick or treaty with them. Now time to go home. I eat some candy. I gave my brother some candy. I watch NFL game until halftime. I go to brush my teeth. Go to bed. That's what I did last Halloween!

Words written in complete sentences

Stage	Number of Students (3 siblings)
Non-Emergent	
Pre-Alphabetic	3 years old
Emergent	3 to 4 years old

Translanguaging Features

Feature	Description
English Phonetic Application	“I seep brea” <i>(I sleep dream)</i>
ASL Phonetic Application	“AA 25 why 3a 8” <i>(Love prefer why pizza delicious)</i>
Vocabulary Application	“When you tell I will I do it.” <i>(Me vs I)</i>
Syntactic Application	See above examples.

Discussion

Older deaf emergent writers (8-13 years old)

- Spoken language was predominately used at home and in school
- Overall small linguistic repertoire in all languages students know
- Restricted translanguageing practices
- Incomplete ideation

Deaf siblings (3-10 years old)

- Signed language was predominately used at home and in school
- Expansive linguistic repertoire in written language
- Salient translanguageing practices
- Reduced ASL features over time

Conclusion

“This study provides evidence that deaf students as old as **thirteen years old** **are developing emergent writing skills** not because of their deafness but likely because they were **in an environment that produced chronic inadequate language access and support.**”

-Holcomb, Dostal, & Wolbers, 2023

Conclusion

“The similarities across all three siblings’ translanguaging practices and developmental trajectories yield valuable information on **deaf children’s potential with language expression and articulation when signed language and written language are reinforced** at home and in school.”

-Holcomb, 2023
